

Rexton Targa

REXTON

Lloyds has carefully searched the product lines of all the major manufacturers to find the best value in mid-level digital technology. We have found the Targa circuit from Rexton provides truly outstanding performance at an amazingly affordable price.

All Targa models are programmed by computer to accurately match the needs of a person's individual hearing loss. Targa instruments feature a memory button that allows the user to change "programs." Typically the first program is set up for normal, quieter everyday listening, while the second program is for improved performance in noisy environments. This aid is the digital replacement for our extremely successful and popular Horizon III analog product line.

Adjustable volume controls are available on all models (except the C.I.C.). Many of our customers have found this to be a perfect move up from older, conventional aids into higher quality digital hearing. The Targa instruments typically sell for \$1,500 to \$2,000 in most local offices or clinics.

Product Highlights:

- Extremely flexible fitting
- Full line of cosmetically appealing models
- Easy adjustments
- Memory button for two listening programs
- Outstanding VALUE
- Superior digital sound
- Easy to use

I am thrilled to tears! The hearing aid works WONDERFULLY! I had forgotten what so many things sounded like. I went to the supermarket and chatted with everyone there! It's perfect!
